

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

withstanding the extensive changes, the same typography and appearance to which we have become accustomed in the earlier edition. This new edition not only guarantees the continued accessibility of a work which was sure otherwise eventually to become hard to obtain, but is a valuable improvement upon the original.

EDWARD P. CHEYNEY.

An Introduction to the Economic History of England. By E. LIPSON, Trinity College, Cambridge. Volume I. *The Middle Ages*. (London: A. and C. Black. 1915. Pp. viii, 552.)

THIS volume is an achievement in diligent culling and combining rather than in fresh and reasoned exposition. It is intended to serve the student who wishes to be told concisely what has been ascertained from printed sources and secondary books about early English economic development. The author is not a reader of manuscripts; he nowhere reveals new sources of information; he seldom attempts to revise accepted doctrines. Yet his laborious search has at times fortified these doctrines, has at other times put them in a new light.

The success of such a work depends largely upon the writer's sense of proportion and upon his comprehensive reading. In neither respect is Mr. Lipson altogether free from reproach. More than one-half of his pages are devoted to town life and industry, less than one-third to agriculture, barely one-eighth to trade and finance. The second fraction, furthermore, attains its magnitude only by embracing a chapter on the agrarian revolution of the sixteenth century. Does Mr. Lipson mean to imply that the Middle Ages ended a century later in agriculture than, according to his own exposition, they did in industry and commerce? The chapter, too, has shortcomings. In it the relative importance of the causes of sixteenth-century rural unrest is not investigated, no comparison of enclosures and increased fines, for example, being undertaken. The numerous surveys of the period do not show that peasant holdings were to any extent consolidated before 1500; nor was the laying together of strips then usual.

More serious than the intrusion of a chapter on a later period is the inadequate treatment of agriculture, trade, and finance before 1500. The tale of the manor is told in the set phrases now grown dull—without inquiry into the diversity of manorial economy which a passing acquaintance with extents and bailiffs' rolls would have revealed to the author. The appearance of a cash nexus, the development of markets for agricultural produce, the rise of new tenures, are the interesting agrarian problems of the late Middle Ages, although Mr. Lipson gives them little attention. If he is to be excused for this because secondary works are unsatisfactory, the same pardon cannot be extended to his treatment of English foreign trade. Here he offends through disregard of important German and French contributions. No sign of acquaintance with Schaube's valuable studies is betrayed in bibliography or text,

nor does Davidsohn or Pirenne fare better. The reader would scarcely gather that Italians and Flemings had played a leading rôle in English export trade before 1350. The best account of Hanseatic merchants in England, that by Schulz, has escaped Mr. Lipson's notice, as has the rest of the extensive German literature about these traders, Schanz alone excepted. The surprisingly slight chapter on finance, too, will have to be rewritten in view of what has been explained by Sir James Ramsay, Mitchell, Gras, Lunt, and Willard.

The core of the volume, however, concerns the towns and their industrial life, there being long chapters on markets and fairs, the gild merchant, the crafts, and the woollen industry. Of these topics, that which offered Mr. Lipson the best opportunity to arrange and extend our knowledge is a treatment of markets and fairs. Yet the chapter is disappointing, largely from a failure to distinguish at the outset the relative significance of the two kinds of marts. As the author does at length point out, markets existed for purposes of local trade, were normal and essential phenomena in every city, borough, and market town; fairs had national and even international significance. Subjects thus contrasted demand separate treatment, present different problems for solution. The reader, too, feels badly oriented when he has to wait until the end of the chapter to learn what were the chief English fairs and when they originated. Nor does he ever learn much about the commodities exchanged, the provenance and quantity of them.

Relative to the gild merchant, a subject already monumentally treated, Mr. Lipson has written two of his most suggestive discussions. He contends that privileges granted to travelling merchants or to the inhabitants of certain towns did after all override the trade monopoly of the gild. In describing the earliest crafts, he argues further that the thirteenth-century conflict between weavers and burgesses was not that between poor and rich, or that between foreigners and natives, but was political in character, due to the purchase by weavers of royal privileges which conflicted with borough customs. His account of the crafts, fuller though it is than Ashley's, is less clear-cut. It does not fairly meet the question of the growth of inequality in wealth within the crafts through the possible increase of a master's apprentices. Scanty consideration is given to Unwin's theory of the development of terminal crafts into groups of petty entrepreneurs, while the origin of the London drapers, a serious problem, is entirely disregarded.

A brief description of capitalistic enterprise does occur in the chapter on the woollen industry, one of the most useful in the book. Here Mr. Lipson essays to correct Professor Ashley in various points. Capitalist clothiers appeared at the end of the fourteenth century, not toward the middle of the fifteenth. Cloths were extensively manufactured in England in the thirteenth century and were even exported; Edward III. revived an old industry which had declined, instead of creating a new one. Such discussions as these, supported as they are by the evi-

dence at hand (though one should not rely too much upon "Stamfords" in Milan and Spain), give Mr. Lipson's chapters their independent value. He is able at times to supplement Gross, Ashley, and Cunningham, writers whom he seldom equals in originality of thought and lucidity of expression. His volume, none the less, is a most useful handbook for the beginner and no one can afford to neglect his judicious summary of evidence winnowed from newly published borough records.

H. L. GRAY.

A History of France. By J. R. MORETON MACDONALD. In three volumes. (New York: The Macmillan Company. 1915. Pp. xiv, 366; 399; 551.)

A COMPREHENSIVE and balanced history of France embodying the chief conclusions of modern investigation would be welcome to a large class of readers and would contribute to the general enlightenment. It cannot be said, however, that this service has been rendered by the work before us and the chief reason is indicated by the author himself in his preface. Writing from France at the end of May, 1915, he says that he is conscious that he has

overstated the temperamental characteristics, and in particular the temperamental weaknesses, of the French. The truly remarkable way in which, under the present trial, France has purified herself of her traditional vices and developed virtues which were supposed to be quite alien to her character drives one to the conclusion, not only that the temperamental qualities of nations change more rapidly than we have been accustomed to think, but also that they are often only qualities which have been foisted on nations by noisy minorities.

Whatever may be meant by noisy minorities foisting temperamental qualities upon nations, and the phrase is utterly baffling, the conclusion to which the reviewer is driven is, not that France has suddenly changed—a most unlikely and unhistorical proceeding—but that the author is very far from understanding the people whose history he has undertaken to write. Our confidence in his judgment and penetration is not increased when we read in the next paragraph that Frenchmen "live by instinct rather than by tradition", that "the range of their political vision is short", and that they lack the historical sense. One thing is clear at the outset. We have to do with another history of France written from the point of view of stiff British conservatism.

Mr. Macdonald's book covers the annals of France from Roman times down to 1871, in a little less than twelve hundred pages. The space assigned to the various periods is judicious. The first volume ends with Louis XII., the second with the removal of Louis XVI. to Paris in 1789, the third with the treaty of Frankfort. Some of the summaries in the first two volumes are excellent for their concision and clearness, as, for instance, those describing the Merovingian monarchy, Charlemagne, Louis XI., Sully, Richelieu, and Mazarin. The
